Algebra worksheet

Question 1. Solve 2x + 7 = 19. Give the value of x.

x = 6

Question 2. Expand 3(x + 4).

3x + 11

AI-estimated feedback - not an official mark

Feedback on your paper

These marks are AI estimates, not official marks. No mark scheme was supplied, so the AI worked out its own answers and checked them by calculation. A question the AI could not read or check is marked "needs checking", not wrong.

1 correct, 0 partly right, 1 not right, 0 needing checking, 0 with no answer found.

Question 1: Correct

You wrote:

$x = 6$

Checked answer:

$x = 6$

Your answer matches the checked answer.

Question 2: Not right

You wrote:

$3x + 11$

Checked answer:

$3x + 12$

The student incorrectly added 4 instead of multiplying it by 3. You forgot to multiply the 4 by 3 — it should be 12, not 11. Always multiply each term inside the brackets by the number outside.
